

HOW TO CLEAN & SANITIZE UTENSILS & EQUIPMENT

- 1st **WASH** in hot water with detergent;
- 2nd **RINSE** with clean warm water;
- 3rd **SANITIZE** in warm water with an approved sanitizer;
- 4th **AIR DRY.**

USING SANITIZER

What to Use:

- ✓ **Bleach Water**
1 teaspoon bleach per gallon of water
Use **chlorine** test strips to check the concentration
Aim for 100 - 200 ppm
- ✓ **Quaternary Ammonia**
Read label directions or check with your supplier
Use **Quat** test strips to check the concentration
Aim for 200ppm

How to Use:

- ✓ **In a Labeled Spray Bottle**
Spray, wait about 30 seconds, then wipe with a clean, damp paper towel. Let the rest of the moisture air dry.
- ✓ **In a Bucket**
Keep a clean cloth or wiper in the bucket
Wring out the cloth and wipe down the **clean** surface
Let the surface air dry
Use one bucket for food-contact surfaces and another for non-food contact surfaces. Label the buckets.
- ✓ **Test Solution Frequently** and make new sanitizer often (especially after heavy use). Dirty Sanitizer doesn't kill germs!
