

Nebraska Wastewater Surveillance for SARS-CoV-2 Facility Report for Grand Island WWTP

Report for Week Ending: 11/12/22 (Week 46)

SARS-CoV-2 virus concentration in wastewater

Sample collection date: 11/6/22
Result: **Detected**
Raw Concentration: **413,467** copies/L
Normalized concentration: **331.1M** copies/person

Normalized concentration is the raw concentration adjusted for sewage flow rate and population, in million copies per person.

Current virus levels in wastewater

Very High (80-100%)
as of 11/6/22

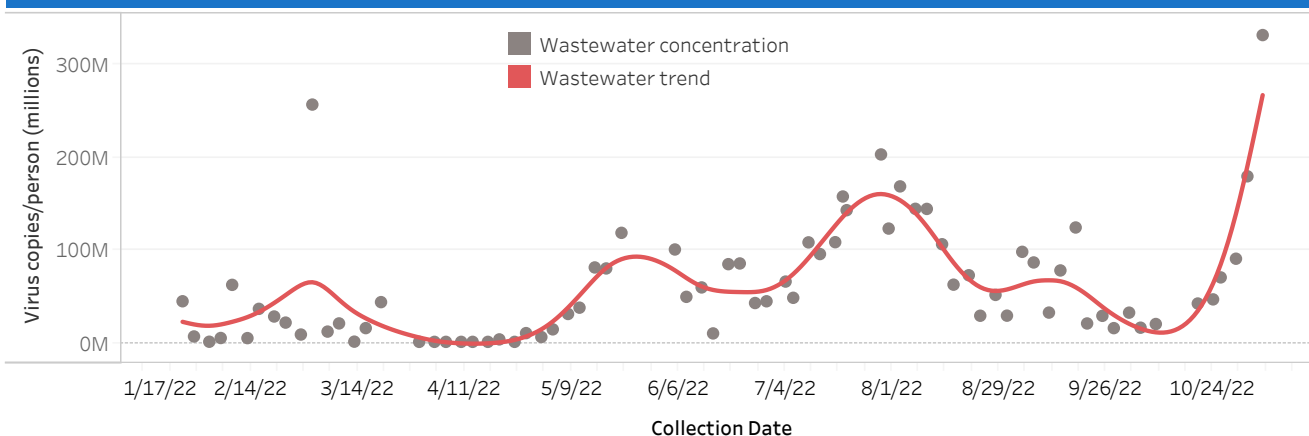

15 day percent change

Increasing
from 10/22/22 to 11/6/22

Current virus levels is based on a percentile that shows whether virus levels at a site are currently higher or lower than past historical levels at the same site. Very High: 80-100%, High: 60-<80%, Moderate: 40-<60%, Low: 20-<40%, Very Low: <20%.

Percent change is the modeled rate of change over last 15 days. Categories include: Increasing (10% or higher); Stable (10% to -10%); Decreasing (-10% or lower)

SARS-CoV-2 normalized wastewater concentration trends by sample collection date

The grey dots represent SARS-CoV-2 normalized wastewater concentration for each sample collection date. Wastewater levels shown in red line are simple smoothing splines to help interpret trends over time. They do not indicate a specific or actionable values.

SARS-CoV-2 wastewater concentrations by collection date: Last 8 samples

	10/5/22	10/9/22	10/20/22	10/24/22	10/26/22	10/30/22	11/2/22	11/6/22
Raw Concentration (copies/L)	21,984	26,901	54,324	59,847	89,267	114,261	224,533	413,467
Normalized Concentration (copies/person)	17.6M	21.5M	43.5M	47.9M	71.5M	91.5M	179.8M	331.1M

Comparison of normalized virus concentrations to all other Nebraska sites in last 1 month
